

Pre-Exposure Prophylaxis (PrEP) and non-Occupational Prophylaxis (nPEP)

CDC Definition: PrEP is a new and powerful HIV prevention method in which people who do not have HIV but who are at substantial risk of getting it take a pill every day to prevent it. Currently, Truvada, a combination of two HIV medicines in a single pill is the only one approved by USA FDA and recommended by Centers for Disease Control & Prevention (CDC) and the World Health Organization (WHO).

PEP is the use of antiretroviral drugs after a single high-risk event to stop HIV seroconversion. It must be started as soon as possible to be effective and always within 72 hours of possible exposure.

PrEP and nPEP are two tools in the HIV high impact prevention toolkit. Activities may include:

- Basic PrEP and nPEP education.
- Assess need for nPEP and afterward referral for PrEP
- Eligibility for and benefit of PrEP
- Ongoing PrEP care: Regular HIV testing, Toxicity monitoring, Periodic STI screening, Adherence support, Condom use to prevent STIs; Risk reduction education about safer sex practices and other options.
- Periodically re-evaluate need for PrEP

Year	2013	2014	2015	2016
ALLOCATIONS HISTORY				
Allocation	\$64,989	\$64,989	\$64,989	\$250,871
Change	0%	0%	0%	386%
UTILIZATION HISTORY
